

Studying Tips

Use the studying tips listed below to help you study more effectively and efficiently. The tips are broken into two sections: study habits and the study environment. Study habits are those actions you take to review material. Study environment describes the location where you practice study habits.

Study Habits

DO LESS	DO MORE
• Studying whenever you get a chance • Reading and highlighting passages • Reviewing material you already know • Giving up and telling yourself you'll figure it out later when the material gets difficult • Cramming for tests • Randomly looking over notes	• Planning for when you will study • Completing and then checking your work with relevant problems • Putting effort toward reviewing material you struggle with • Searching for possible internet resources: texts, videos, podcasts, etc. • Giving yourself time (several days) to review and prepare for tests • Preparing a study agenda for the goals you wish to accomplish during your study session

Study Environment

DO LESS	DO MORE
• Studying in noisy chaotic areas • Chatting with others • Laying in bed • Jumping up to get something else every once in a while • Working in poor lighting • Late night studying	• Find a quiet area. However, some people like soft non-distracting music playing in the background. • Let others in the family know you are in the middle of studying and to not disturb you. • Sitting at a desk in a comfortable way • Plan for everything that you need to be within reach. That includes snacks! • Adjusting the lighting to a medium level • Studying during the day: research this is 1.5 times more effective and efficient.
